SIT

PROACTIVE CYBERSECURITY. DEVELOPED IN SWEDEN.

We find your risks before attackers do.

And show you what to fix first and how.

SIT identifies vulnerabilities, prioritises the risks that matter most in your IT environment and shows whether your actions make a difference. We help you reduce risks before they are exploited.

WE FIND WHAT OTHERS MISS. MUCH FASTER.

Serious vulnerabilities others miss.

SIT identifies relevant and critical vulnerabilities that other market-leading solutions miss. Our comparative tests also show that we complete scans in less than half the time.

YOUR ADVANTAGE Better insight. Better decisions.

SEE WHAT IS REALLY THERE

Find the vulnerabilities others miss

SIT Appliance's dedicated physical hardware is part of our deep technical fingerprinting. Precise identification of systems, services, products and versions strengthens vulnerability matching and reveals serious risks other tools miss.

FROM FINDINGS TO ACTION

Fix the risks that matter

SIT Risk Score combines threat intelligence, exploits, CISA KEV, EPSS, attack chains and business criticality in your IT environment. The Top Priorities report shows what to fix first and how.

Threats do not wait.

New vulnerabilities, zero-days and changing threat intelligence are continuously matched against your IT environment. When new relevant risks are found, you are notified without waiting for the next scan.

SWEDISH TECHNOLOGY. LOCAL CONTROL.

Your data stays with you

SIT Appliance is hardened, locked down and encrypted. Analysis, findings and history stay local. No information leaves your network. You retain an independent risk picture across sites, providers and cloud environments when Appliance can reach them.

AUTOMATED CHECKS IN PRODUCTION

Powerful. Without the overhead.

Agentless and unauthenticated checks require no privileged target accounts or endpoint software. SIT handles updates and maintenance. New systems on included networks are checked automatically when reachable. SIT Appliance identifies technical conditions for intrusion without carrying out the intrusion, allowing safe, automated checks in production.

Finding vulnerabilities is only the beginning.

What matters is seeing risk fall.

RISKS FALL. YOU SEE THE RESULTS.

See the impact of your actions

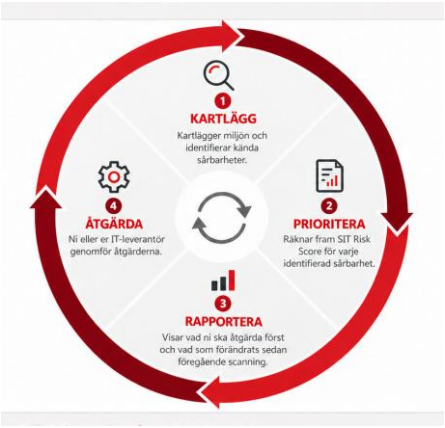

Delta Report shows what has been fixed, what remains and what is new. SIT Risk Index tracks your overall technical risk level and highlights where action is most needed. You gain traceable insight for systematic security work.

TECHNICAL COMPLIANCE

See where you stand against requirements

SIT maps your technical control results to multiple frameworks and standards, including ISO 27001 and NIS2. Combined with your own assessments, this gives you a clear picture of which technical security requirements you meet and where gaps remain.

HOW WE HELP YOU REDUCE RISK. CONTINUOUSLY.

SIT MAPS, PRIORITISES AND FOLLOWS UP.

We analyse your environment and recommend what to fix and how.

YOU TAKE ACTION.

You or your IT provider implement changes with support from our experts.

SIT KEEPS CHECKING.

The next scan shows the impact. We continuously monitor threats and alert you to new relevant risks.

THE EXPERIENCE BEHIND THE TECHNOLOGY

A Swedish challenger with deep expertise.

SIT draws on extensive experience in vulnerability assessments, penetration testing, incident forensics, secure development, encryption and security in high-assurance environments. Our services include monthly expert time, ongoing support and updates without a separate support agreement.

Three services. One powerful technology.

ASSURANCE

When others run your IT.

Independent checks, your own risk picture and better supplier dialogue.

OPTIMIZATION

When security is already established.

Optimise and consolidate your existing security stack.

CONTROL

When you need a clear structure.

Build systematic technical security work with expert support.

THE TECHNOLOGY BEHIND OUR SERVICES

SIT Appliance powers all three services with internal risk checks. SIT Xternal checks your internet exposure. Together they offer a broader risk picture. SIT complements protection and response systems, can replace overlapping scanners and connects to your workflows through optional integrations.

Are you sure you are finding your most critical risks?

Let us show you what SIT finds in your IT environment and how we help you address the risks that matter most.
